

Coffee Shop Sales Analysis Report

Introduction

This report provides an overview and analysis of sales data from a coffee shop chain. The objective is to understand sales trends, customer preferences, and store performance based on transaction-level data.

Data Overview

The dataset consists of detailed transactional records including the date and time of purchase, quantity sold, store location, product details, and revenue generated. The data spans multiple locations and product categories such as coffee, tea, and chocolate beverages.

Key Metrics

- Total Revenue: \$698,812.33
- Total Transactions: 149116
- Average Revenue per Transaction: \$4.69

Revenue by Product Category

Coffee: \$269,952.45

Tea: \$196,405.95

Bakery: \$82,315.64

Drinking Chocolate: \$72,416.00

Coffee beans: \$40,085.25

Branded: \$13,607.00

Loose Tea: \$11,213.60

Flavours: \$8,408.80

Packaged Chocolate: \$4,407.64

Top 5 Products by Revenue

Sustainably Grown Organic Lg: \$21,151.75

Dark chocolate Lg: \$21,006.00

Latte Rg: \$19,112.25

Cappuccino Lg: \$17,641.75

Morning Sunrise Chai Lg: \$17,384.00

Revenue by Store Location

Hell's Kitchen: \$236,511.17

Astoria: \$232,243.91

Lower Manhattan: \$230,057.25

Conclusion

The analysis reveals key trends in product and store performance. Coffee is the highest contributor to revenue, with certain products significantly outperforming others. Peak sales hours and top-performing locations can inform operational and marketing strategies to further optimize revenue.
